Shadi Ashraf Adli Mehany

Junior Backend Developer | Python & Django | AI Agent Engineering

Assiut, Egypt | +201144227242 | shadiadli3@gmail.com

LinkedIn: linkedin.com/in/shadi-ashraf-0643a02a9 | GitHub: github.com/shadiahsraf

PROFESSIONAL SUMMARY

Fourth-year Computers and Information student at Assiut University focused on Python and Django backend development. Developed and maintains Boys Center, a Django and PostgreSQL platform deployed for approximately 500 young members, including Odoo ERP synchronization. Built BOCHA Workspace, a full-stack app with a Django REST API, a React/TypeScript frontend, and a Gemini tool-calling AI assistant. Completed IBM's AI agents and LearnQuest's agentic engineering specializations; uses Claude Code and Google Antigravity while owning requirements, review, testing, and delivery.

TECHNICAL SKILLS

Backend Development: Python, Django, Django ORM, Object-Oriented Programming, REST APIs, Django REST Framework (project experience, AI-assisted), JWT and Google OAuth Authentication, Role-Based Access Control, Business Logic, Odoo ERP Integration (XML-RPC)

Databases: PostgreSQL, SQL, SQLite, Database Design

Testing and DevOps: Django Test Framework, Pytest, Debugging, Git, GitHub, Linux, SSH, Nginx, Production Troubleshooting, Docker (basic familiarity)

AI Agents: Built: Gemini function calling, tool-calling agent design, system-prompt design. Studied in IBM coursework and guided labs: LangChain, LangGraph, agentic RAG, ReAct and Reflexion, multi-agent frameworks (CrewAI, BeeAI, AG2/AutoGen)

Frontend: React, TypeScript, Tailwind CSS, Zustand, Vite, JavaScript, Alpine.js, Chart.js

AI-Assisted Development: Claude Code, Google Antigravity, Prompt Engineering, Review and Validation of AI-Generated Code

PROJECTS

Boys Center: Youth and Sports Club Management Platform

Independent Developer and Project Owner | AI-assisted (Claude Code); owns deployment and maintenance

GitHub: github.com/shadiahsraf/boys_center | **Live Demo:** sports.boyscenter.online/ar | **Screenshots:** Drive

Technologies: Python, Django, PostgreSQL, Odoo (XML-RPC), Alpine.js, Chart.js, PWA, ReportLab, openpyxl, Nginx

- Developed and independently own a production Django and PostgreSQL platform serving approximately 500 young members, with five user roles (Administrator, Coach Manager, Coach, Parent, Youth), role-based permissions, tailored dashboards, and bilingual Arabic/English (RTL/LTR) interfaces.
- Implemented QR-code attendance tracking with expiring session tokens, per-device check-in restrictions, and automatic late-arrival detection, helping the club keep attendance at training sessions and meetings better organized and more consistent.
- Built sports league and tournament management with automated standings, points and goal-difference calculations, and top-scorer leaderboards.
- Integrated the platform with Odoo ERP to synchronize member records over XML-RPC, using Django management commands with dry-run and full-sync modes.
- Automated PDF and Excel attendance and evaluation reports with ReportLab and openpyxl, and added Progressive Web App support with service worker caching and an offline fallback page.
- Deploy and maintain the live system and resolve production issues; configured HTTPS redirect, HSTS, secure cookies, CSRF protection, and clickjacking protection.

BOCHA Workspace: Personal Productivity and AI Workspace

Personal Project (in active development) | AI-assisted development (Google Antigravity)

GitHub: github.com/shadiahsraf/BOCHA-Workspace | **Screenshots:** Drive

Technologies: Python, Django REST Framework, JWT, Google OAuth, Gemini API (function calling), React, TypeScript, Vite, Tailwind CSS, Zustand

- Built a full-stack, Notion-inspired productivity workspace: a React 19, TypeScript, Vite, and Tailwind CSS frontend with a Django REST API (JWT and Google sign-in) covering tasks, projects, notes, inbox capture, a calendar, and a statistics dashboard.
- Implemented a Gemini function-calling AI assistant with five user-scoped workspace tools (tasks, projects, notes, inbox) and web search, plus exponential-backoff retries and model fallback for rate-limit handling.
- Structured the frontend into typed service, hook, and store layers with Zustand and validated, fail-safe persisted storage, Radix UI components, light/dark/system themes, and RTL-aware Arabic/English i18n infrastructure.
- Enforced authentication and per-user data isolation across the API, with 27 passing backend tests; the frontend passes strict TypeScript checks and builds for production.
- Followed an iterative Git workflow, defining requirements and architecture and reviewing and testing AI-generated code.

CERTIFICATIONS AND SPECIALIZATIONS

Building AI Agents and Agentic Workflows Specialization, IBM (Coursera) | October 2026

Courses: Fundamentals of Building AI Agents; Agentic AI with LangChain and LangGraph; Agentic AI with LangGraph, CrewAI, AutoGen and BeeAI

Guided labs on LangGraph agents with memory and conditional logic, agentic RAG, self-improving agents, multi-agent systems with CrewAI, and BeeAI and AG2 (AutoGen).

Vibe Coding and Agentic Engineering Specialization, LearnQuest (Coursera) | November 2026

Courses: Foundations of AI-Assisted Web Development; Build Real-World Applications with AI; Scale and Professionalize AI-Built Projects

AI-assisted development with AI coding assistants (Cursor, GitHub Copilot, Claude Code), prompt engineering, third-party API and database integration, debugging, code quality, and documentation.

EDUCATION

Assiut University, Faculty of Computers and Information

Fourth-Year Student | Expected Graduation: 2027 | GPA: 3.5

ADDITIONAL SKILLS

Office and Data: Microsoft Word, Excel, PowerPoint, Data Entry, Data Organization, Document Formatting

Creative: Video Editing, Video Montage, Presentation Design
